### **MUD JACKING PROJECT**

**May 14 to May 21, 2019 from 8:00 AM to 5:00PM**

Mudjacking is the answer to the sunken concrete problems for some of the properties in our community. Uneven concrete is not only unsightly, it is also a tripping hazard. Slab replacement does not address the soil voids underneath the damaged concrete. The empty pockets of air remain so the slab is likely to settle again. During the process, soil voids are filled. As a result, the concrete is much more stable and secure, and the repair lasts much longer.

The repair enhances property value and is the most effective way to save concrete slabs by raising them back to the proper level and grade.

**Please be advised that 24/7 Restoration will be working in the community from 8:00 AM to 5:00 PM starting on May 14th and up to May 21<sup>st</sup>.** The crew will start on the back garages and work from there. Please understand that we cannot predict which slab will be lifted on each day as the contractor cannot tell how long each job will take. Timing depends on how big the voids under the slabs are.

The project will take one week to complete, if weather permits.

**Please do not drive on any of the slabs for 24 hours after they are lifted.**
